

Australian Products:

1) Mobile 04 Direct Dial:

How it works:

- Mediatel provide standard Australian 04 mobile numbers that are part of many mobile Cap Plans, so calls to these numbers can often be seen as free.
- Mediatel receive an outpayment for each minute on these numbers that covers the cost of an outbound international call.
- The customer calls the mobile number, and the call is answered by our IVR (Interactive Voice Response) system, that prompts the caller to enter the international number that they wish to call.
- This service covers most major countries – India, UK, China, USA, and NZ fixed lines, however, some destinations are not covered by this service because the outbound call cost is too high – for example UK Mobile, or Pakistan.

How you earn commission:

- We allocate a unique Australian 04 mobile number to you that you can promote to your customers.
- We pay you a fixed fee for every minute that someone calls your number.
- We provide online and daily email stats so you can track your earnings at all times.

2) Mobile Topup - the Virtual Calling Card:

How it works:

- Customers topup by texting a keyword i.e. CALL to our shortcode – 19701300. They are then sent back a message that charges \$6.60 on to their mobile phone bill.
- Also on this message is a local Sydney number which is often free from a mobile phone.
- To access the service, the customer calls the local Sydney numbers, and the call is answered by our IVR (Interactive Voice Response) machine, asking the caller to enter the overseas number that they wish to call
- If the call is made from a mobile we automatically collect the callers mobile number and check the credit available on the account. We will then connect the call, and the

callers credit is debited depending on the quoted rate of the destination dialled. Once the customers credit has expired, their phone will be automatically re-charged if they do not opt out of this function.

How you earn commission:

- You will be given your own dedicated keyword on our shortcode 19701300.
- You will be paid a fixed rate for every message containing your keyword that is sent in by a customer.
- You can track how many messages have been sent in on your keyword via our online stats, or in our daily stats email.

3) Landline Topup - \$30.00 drop charge

How it works:

- This service works in a similar way to the Mobile Topup product, but it is designed to be used on a landline phone rather than a mobile
- The customer dials a Australia 190 premium rate number, which charges the \$30.00 per call made to the number. The charges appear on their Telstra (or equivalent supplier) phone bill. Each call gives £1.50 of call credit on the customer's account.
- The customer is given a unique PIN number, and a local Sydney access number. When they call the access number, they enter their PIN, and then they can make international calls, with the credit they topped up by calling the \$30.00 number.
- The service is like a standard calling card, but paid for by calls to the \$30.00 number. Customers can call the \$30.00 number as many times as they like to top up their account

How you earn commission:

- We issue you with your own unique \$30.00 premium rate number.
- We pay you a fixed amount on every \$30.00 call made to the premium rate topup number.

4) Standard SMS topup:

How it works:

- This is our brand new service, enabling customers to send regular SMS (which are part of their Cap Plans) to our normal 04 Australian mobile numbers, and receive airtime credits for overseas calls.
- For example – for every text message we receive, we give 30 seconds free calling time to India.
- The customer is given a local Sydney or Melbourne number to call to access the service.
- Many customers will have multiple free text messages as part of their Cap Plans, so the more messages they can send, the more free airtime they receive.

How you earn commission:

- We allocate you your own Australian 04 mobile number for your customers to send texts to.
- We pay you a fixed amount for every SMS received on your unique number.
